

Employer and Occupation "Retired" Standardization

Crimson now has a configurable standardization feature that will review all people records for any that include the word "Retired" in either the **Occupation** or **Employer** fields and then programmatically update both fields to say "Retired." For example, if a donor has "Retiree" in the employer field and "Lawyer" in the occupation field, Crimson will automatically update both fields to say "Retired."

This program runs on a nightly basis and will help clients standardize their employer and occupation information so that they appear consistent on FEC reports.

The nightly job needs to be enabled per client/database so if this is a feature that you are interested in, please contact CrimsonSupport@cmdi.com.
