

In CrimsonFiler, there is a **Calculation** setting that allows you to decide whether or not you want your FEC reports to automatically recalculate after information has been imported or saved.

To edit this setting, login into CrimsonFiler, select **Settings** and then select **Calculation**.

By default, all CrimsonFiler accounts have the **Calculation** setting enabled so that FEC reports are automatically calculated after all imports and saves.

If you choose to not have this setting enabled by unchecking and clicking the **Save** button, then you will need to recalculate your report manually every time a change occurs. You can always manually

recalculate your report by pressing the **Recalculate** button  under a report's **Cash Summary section**.
